

Horizontal toggle clamps have the advantage of having a low profile when the handle is in the closed position, and so are most suitable for applications having a height restriction.

The arm and handle geometry use opposite axis directions.

Features include:

- Red vinyl hand grip with cushioned rib profile for improved user comfort.
- All body and linkage components are zinc plated to resist corrosion.
- Pivot points are fitted with hardened steel or stainless steel rivets to provide a long service life.
- Clamps with adjustable spindles are manufactured with a formed end to the arm, which captivates the spindle should it become loose during operation.
- The handle and arm linkages are designed to provide a smooth continuous action when the handle is opened and closed.
