Vertical toggle clamps are the most versatile, producing the highest clamping forces with the arm and handle geometry using the same axis direction.

Features include:

- Red vinyl hand grip with cushioned rib profile for improved user comfort.
- All body and linkage components are zinc plated to resist corrosion.
- Pivot points are fitted with hardened steel or stainless steel rivets to maintain accuracy and provide a long service life.
- Clamps with adjustable spindles are manufactured with a formed end to the arm, which captivates the spindle should it become loose during operation.
- Flanged washers are supplied with all slotted arm versions and weldable bolt retainer brackets are supplied with all solid arm models.
- The arm and handle opening angles can be increased on some models by the removal of a positioning pin on the base of the clamp.
