

Magnets

Technical data for pot magnets

Structure:

Pot magnets are magnets that, due to their structure have only one attracting surface. No other surface is magnetic. This construction makes it possible to limit the three-dimensional affect of the magnetic field so that no unintentional magnetization of the entire workpiece in contact with the pot magnet, or of the machine elements surrounding the magnet occurs.

Designs:

The deep pot magnets series:

K0545

K0546

K0547

have a core made of the permanent magnetic material AlNiCo, which is inserted for magnetic shielding into a soft iron pot with an intervening sleeve made of a non-magnetic material.

The shallow pot magnets series:

K0548

K0549

have a core made of the permanent magnetic ceramic material SrFe (hard ferrite) . This is also inserted into soft iron pot to create the desired magnetic shielding.

The pot magnets series:

K0550

K0551

have a SmCo core, an alloy of rare metallic elements together with cobalt.

SmCo increases the magnetic force by three to five times that of AlNiCo or hard ferrite magnets by the same magnet size.

Magnetic strengths:

The values indicated in the table are minimum values that are achieved for a vertical pull-down with full-surface contact of the pot magnets on soft iron or low-carbon steel workpieces of sufficient thickness. By unclean pole faces or uneven workpieces, air gaps are formed which sharply decrease the attractive force. It is therefore advisable to always ensure a clean pole face and to clean it from time to time if necessary.

Diagram:

Reduction of the magnetic strength of a deep pot magnet with increasing air gap (non-magnetic intermediate layers have the same effect as air gaps).

Mounting instructions for shielded pot magnets without pins

not correct

correct

correct

correct

not correct

correct

SmCo pot magnets (deep or shallow) must not be mounted directly in iron, but must be screwed, glued, pressed or cast into a sleeve of non-magnetic material (see illustration below).

Magnet series shielded system

Installation or fastening possibilities of pot magnets

Order No.	Description	System	Temperature* max. °C	Fastening possibility
from K0545.01 to K0545.10	deep pot magnet	shielded	450	Pressing in/shrink-fitting Gluing in
from K0546.01 to K0546.09	deep pot magnet	shielded	450	Soldering in (soft soldering)/ Gluing in
from K0547.01 to K0547.10	deep pot magnet	shielded	450	Riveting the pin in/ Screwing in
from K0551.01 to K0551.15	deep pot magnet	shielded	200	Pressing in/gluing in/ Screwing in
from K0548.01 to K0548.10	shallow pot magnet	shielded	100	Pressing in/gluing in
from K0549.01 to K0549.26	shallow pot magnet	shielded	100	Screwing in
from K0550.01 to K0550.18	shallow pot magnet	shielded	200	Pressing in/gluing in

* Long-term heating or alternating thermal stresses may lead to mechanical changes in the magnet system. In many cases they have no influence on the function. The same applies for chemical stresses (chemical baths, aggressive gases, etc).

K0545

Magnets deep pot

AlNiCo with fitting tolerance

Material:

Housing, steel.

Magnetic core AlNiCo.

Version:

Housing bright.

Sample order:

K0545.01

Note:

Shielded system. Diameter "D" ground to a h6 tolerance. Fastening possibilities by pressing, shrink-fit or gluing.

Deep pot magnets can be shortened by the dimension "H" with no loss of attracting force.

Temperature range:

max. 450°C.

Drawing reference:

K0551

Magnets deep pot

SmCo

Material:

Housing brass.

Magnetic core SmCo.

Sample order:

K0551.01

Note:

Smooth design, shielded system. Diameter "D" ground with h6 tolerance. Under no circumstances may SmCo magnets be pressed directly into iron, as otherwise loss of attractive force due to magnetic short circuits occurs. SmCo magnets are especially suitable for direct use in spot-welding machines, as no demagnetisation occurs.

Deep pot magnets can be shortened by the dimension "H" with no loss of attractive force.

Temperature range:

max. 200°C.

Drawing reference:

Version:

Housing, galvanized.

Black protective rubber jacket.

Sample order:

K0564.01

Note:

Shallow pot magnets with threaded pin, shielded system. With rubber protective jacket for protecting sensitive surfaces. The coefficient of friction is increased by the rubber jacket, so that high lateral friction is achieved.

Temperature range:

max. 60°C

Drawing reference:

1) magnetic face

2) magnet

3) rubber

KIPP Magnets shallow pot with threaded pin NdFeB, with rubber protective jacket

Order No.	D	D2	H	L	Magnetic force N
K0564.01	22	M4	6	12,5	50
K0564.02	43	M6	6	21	85
K0564.03	66	M8	8,2	23	180
K0564.04	88	M8	8,2	23,5	420

K0565

Magnets shallow pot with through hole

NdFeB, with rubber protective jacket

**Material:**

Housing, steel.

Magnetic core NdFeB (neodym).

Protective rubber jacket, synthetic rubber.

Version:

Housing, galvanized.

Black protective rubber jacket.

Sample order:

K0565.01

Note:

Shallow pot magnets, shielded system. With rubber protective jacket for protecting sensitive surfaces. The coefficient of friction is increased by the rubber jacket so that high lateral friction is achieved.

Temperature range:

max. 60°C.

Drawing reference:

1) magnetic face

2) magnet

3) rubber

K0565.03

KIPP Magnets shallow pot with through hole NdFeB, with rubber protective jacket

Order No.	D	D1	D2	H	T	Magnetic force N
